Neways Cascading Revenol™

A superior antioxidant formulation for maintaining good health*

Description

Just as one vitamin or one mineral is not the key to total health, one antioxidant is not the key to effective free-radical elimination. *Cascading Revenol* provides the incredible strength of the most superior antioxidants

in the world, all in one bottle.* These antioxidants are not only provided in the doses you need, but also in a unique formulation that will provide you with the tremendous regenerative technology of antioxidant cascades.

After entering the body, most antioxidant molecular structures will grab one free radical and then change into an inert state, ceasing to have any further scavenging value. Neways' technologically advanced cascading formulation actually regenerates molecules so that many scavenging molecules can actually take multiple free radicals from the cells of the body instead of becoming inert after only one scavenge. Thus, the value of each individual antioxidant molecule increases exponentially.

Surprisingly unknown to many antioxidant users is the fact that, in several cases, after an antioxidant molecule has scavenged a free radical, the antioxidant molecule itself becomes a free radical. The effects of antioxidant-derived free radicals become minimized as ingredients work synergistically in the most advanced antioxidant formula of the new millennium—*Cascading Revenol*.

Key Ingredients

Cascading Revenol's formulation boasts healthy doses of more than 20 of the most potent health-promoting antioxidants in the world. Included in this lineup are the following:

- **Astaxanthin** is an impressive nutrient that sits atop the antioxidant pyramid. This powerful new antioxidant has the very rare to cross the blood-brain barrier and neutralize single and triplet oxygen radicals as well as

alkoxyl, peroxy and hydroxyl radicals. Astaxanthin is a fat- and water-soluble nutrient able to attach itself to lipoprotein for fast travel in the bloodstream and excellent bioavailability. Its "polar power" enables this nutrient to attach itself to hydrophilic nodes found on the sides of the cell membrane and to the cell membrane bilayer where the free-radical attack is first encountered.

- **Rosemary officinalis extract's** unique cascading power revolves around carnosic acid. After this powerful molecule has extracted a free radical, it changes its structure and becomes carnosol. Carnosol also extracts a free radical and then changes again, becoming rosmanol. Rosmanol continues the free radical scavenging until galdosol is created and further continues the scavenging process. All of this is accomplished beginning with just one powerful antioxidant molecule and is but one example of the numerous cascades found in *Cascading Revenol*.
- **Esterfied vitamin C** is needed to regenerate the antioxidant effects of vitamin E, preventing this well-known vitamin from becoming a free radical itself. The ingredient, glutathione is then responsible for the regeneration of vitamin C to its original beneficial form. Then, alpha lipoic acid helps do the same for glutathione. Of course, this process is further carried out by other ingredients in the never-ending cascading combinations found throughout *Cascading Revenol*.
- **Carotenoid complex, bioflavanoid complex, selenium selenomethionine and potassium sulfate** are all well-respected antioxidants participating together in a powerful cascade to reactivate the free radical scavenging activity of otherwise used, inert antioxidant molecules. There is also a vitamin C/bioflavanoid combination that creates a similar cascade to elongate the life spans of antioxidant molecules.
- **Grape extract**, ranks high in bioflavanoid power. Neways would not be content without being able to offer you the most powerful and bioavailable broad-spectrum antioxidant grape seed extract on the market. For this reason, Neways uses a full-spectrum grape seed extract from the Rhone Valley in France, the richest wine producing area in the world. Neways' grape seed extract boasts superior scores when tested for procyanidolic value

using both the Porter Values and the Bate-Smith testing systems.

- **Decaffeinated green tea extract**, boasting a 90-percent catechin content, is a knockout punch in the fight against free radicals. Green tea is known to assist against oxidation of lipids.* Green tea demonstrates properties that support overall body health.*
- **Turmeric extract** with at least a 95-percent curcuminoid content, is one of the most versatile and well-studied antioxidants of the last decade. Curcuminoids are able to not only neutralize existing free radicals, but also support against free-radical formation.*
- **N-acetyl cysteine, resveratrol, ellagic acid, co-enzyme Q10, quercetin, and zinc monomethionine** are a few of the other nutrients performing a vital role amid the army of antioxidants in *Cascading Revenol*.

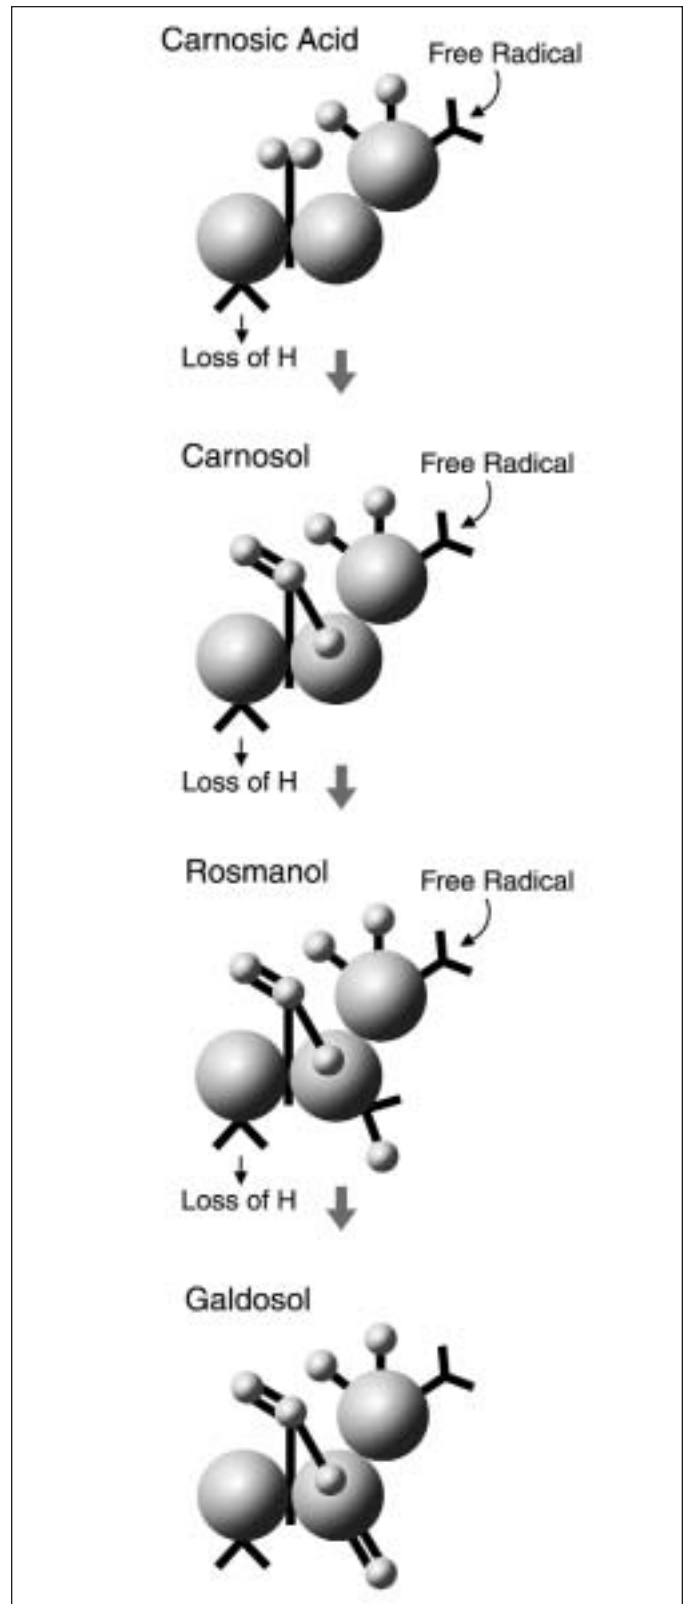

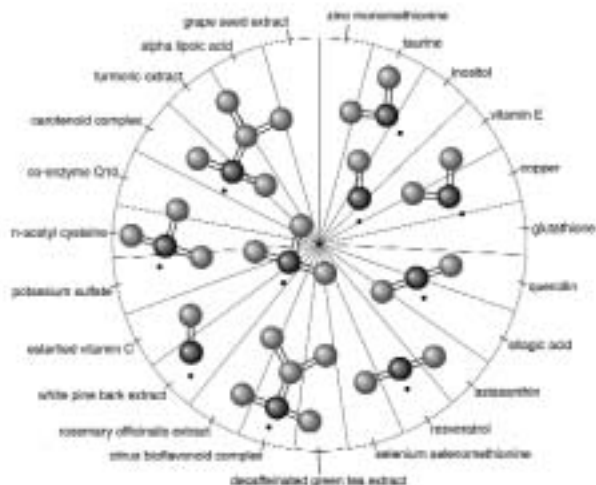

Benefits

- *Cascading Revenol* aids in the body's overall health and supports against the effects of aging.*
- *Cascading Revenol* packs a healthy 1268 mg mega-dose of cascading antioxidants, which would cost hundreds of dollars if purchased separately outside this cascading formulation.
- *Cascading Revenol's* actually regenerates tocopherol-induced free radicals as well as other antioxidant-induced free radicals; these free radicals and many inert molecules are changed back into antioxidants for more effective and prolonged scavenging.

Usage

When you take the recommended adult dosage of two capsules per day, your body will receive the rejuvenating power of a healthy 1268 mg dose of the most ingeniously formulated, high-impact cascading antioxidants known to man. Children may take one capsule per day. Women who are pregnant or nursing should consult a physician before using this product. Household pets such as dogs and cats may take one capsule per day.

23 Antioxidants in *Cascading Revenol*

The carnosic acid cascade is one example of the many cascading properties of *Cascading Revenol*. Advanced cascades such as this one can regenerate inert antioxidant molecules so that they can actually take multiple free radicals from the cells of the body.
